Abstract:

Vaccines have a long history in Canada. They began with smallpox in 1946. In this paper, we suggest that vaccines of children cause Down Syndrome, Schizophrenia, IBS Autism in children and Alzheimer Disease in older adults.

Keywords: Flu vaccines; anemia; chronic bronchitis

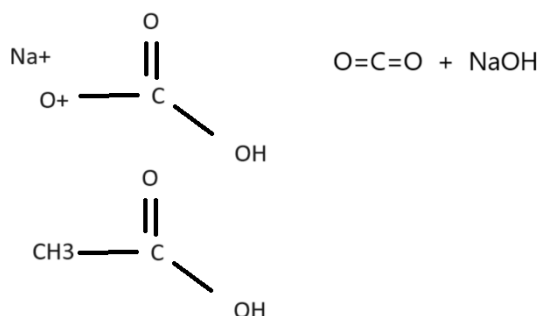

Introduction:

We've shown in previous papers that alcohol (OH) causes cancer. The liver is an organ of the immune system. It processes Iron Fe. The balanced chemical equation is as follows:

Modern vaccinations include Hep B (Liver disease) as well as HSV1 and Chicken Pox (HSC) Epstein Bar (HSV). So HSV has been previously shown to lead to Alzheimer disease.

Two other vaccinations that affect the nervous system are the Pap Virus and the Polio Virus (Central Nervous System and Peripheral Nervous system).

The bottom illustration is the molecule that leads to Autism.

Now for the rates of occurrence of Down Syndrome, Schizophrenia, Mosaic Down Syndrome, Autism and Alzheimer Disease.

DS	1/700
Sz	1.1/100
MDS	1/450
Autism	1/36
Hep B	5/100k
Polio	1/20k
SUM	0.0444~0.045=9/2

$$t^2t-1=E$$

$$(2/9)^2-(2/9)-1=1/0.852=\text{Rate of clinical occurrence of Alz.}$$

The high rate of Alzheimer Disease can be explained by the occurrence of DS, Sz, MDS, Autism, Hep B, and Polio. Vaccines lead to DS, Sz, IBS, Autism, and eventually Alz.

Ready to submit your research? Choose Alcrut and benefit from:

- fast, convenient online submission
- rigorous peer review by experienced research in your field
- rapid publication on acceptance
- authors retain copyrights
- unique DOI for all articles
- immediate, unrestricted online access

At Alcrut, research is always in progress.
